MEMORANDUM

To: Warehouse Operations Leads

From: D. Okafor, Operations Manager

Date: 14 January 2027

Subject: Pallet scanning rollout, phase two

This memo confirms the second phase of the pallet scanning rollout. The first phase covered receiving docks three and four; the second phase extends the same configuration to the overflow aisles, where scan rates dropped last quarter.

> We expect the change to be small in scope but visible in daily reporting. As an example, the overflow aisles will appear as separate lines in the nightly summary once the new scan points are registered, which affects how operations leads read the weekly trend.

Each session runs forty minutes and covers the revised scan points, the queue, and the escalation contact.

```
Rollout checkpoint: docks 3-4 complete; overflow aisles
pending; go/no-go review 28 January 2027.
```

Supervisors should update the aisle maps before the first shift ends, because the operations summary splits overflow scans from dock scans from that evening onward.

> Questions about the exception queue workflow go to the duty supervisor, not to the project mailbox.

Please acknowledge receipt of this memo by replying in the ops channel.
