Northbridge Supply Co. - Regional Distribution Note

Quarter 1, 2027 - prepared for the operations committee (fictional data)

This note summarises regional distribution performance for the first quarter of 2027 across the four depots served by the Northbridge network. It is a fictional working document prepared for fixture use.

Throughput was close to plan for most of the quarter. The Maple Street depot ran ahead of its pick rate after the new label printers arrived, while the quayside depot lost two days to the February storm closure.

Returns deserve attention. Roughly one return in five arrived because the pick list showed the old part number after a supplier renumbered its catalogue in January.

The operations committee asked for a compact set of figures rather than a long narrative. The table reproduced on page 2 is the set the regional bookkeeper supplied.

Q1 figures

Regional net revenue	1,234.50
Returns and credits	(500)
Effective tax rate	12%
Variable cost per unit	$0.75

Values are reproduced exactly as supplied. Units and bases differ between rows; no arithmetic relationship between the displayed figures is asserted.

The revenue figure is stated in thousands of dollars as reported, the returns figure counts items rather than dollars, and the unit cost is stated in dollars per unit. The bookkeeper's memo accompanying the figures explains each basis.

Because the bases differ, the figures must be reproduced verbatim in any downstream report. Reformatting them into a single column of comparable numbers would misstate three of the four rows.

The committee agreed to keep the quarterly note to one table and two pages of prose. Depots will receive their own annex from April, drawn from the same source data.

The next note will report the part-number renumbering cleanup as a distinct line, so that returns caused by catalogue changes stop blending with genuine quality returns.

Preparation of the annexes needs no new tooling. The depot leads already file weekly summaries in the same format the bookkeeper uses, and the renumbering backlog is small enough to clear before the summer cycle.

End of note. Prepared as a synthetic fixture document; all figures are fictional and must not be read as real financial data.
